Background

Parkin, a RING-type E3 ubiquitin-protein ligase, is involved in the ubiquitination pathway and contributes to protection from neurotoxicity induced by unfolded protein stresses. Its ubiquitin-protein ligase activity promotes the degradation of a variety of proteins including itself. Mutations in Parkin are implicated in the pathogenesis of autosomal recessive familial Parkinson's disease.

Synonyms

AR JP, LPRS2, PARK2, PARK2/Parkin, Parkin, Parkinson disease protein 2, PDJ, PRKN
