Background

THRSP (Thyroid hormone-inducible hepatic protein) is a protein that in humans is encoded by the THRSP gene. The protein encoded by this gene is similar to the gene product of S14, a rat gene whose expression is limited to liver and adipose tissue and is controlled by nutritional and hormonal factors. This gene has been shown to be expressed in liver and adipocytes, particularly in lipomatous nodules. It is also found to be expressed in lipogenic breast cancers, which suggests a role in controlling tumor lipid metabolism (RefSeq).

Synonyms

S14, Spot 14 protein, SPOT14, THRSP
