Background

RASGRF2, also named as GRF2, functions as a calcium-regulated nucleotide exchange factor activating both Ras and RAC1 through the exchange of bound GDP for GTP. RASGRF2 preferentially activates HRAS in vivo compared to RRAS based on their different types of prenylation. RASGRF2 functions in synaptic plasticity by contributing to the induction of long term potentiation.

Synonyms

GRF2, RAS GRF2, RASGRF2

Selected Validation Data

Immunohistochemical analysis of paraffin-embedded human placenta tissue slide using KHC2057 (RASGRF2 IHC Kit).
