Background

FOXP3 is a transcription factor belonging to the Forkhead box (FOX) protein family. It contains a forkhead-winged helix domain that acts as a transcriptional activator or repressor. FOXP3 is the master regulator of regulatory T cells (Tregs), a subset of CD4+ T cells with potent suppressive activity. It plays a critical role in maintaining self-tolerance and preventing autoimmune diseases by controlling the development and function of Tregs. The expression of FOXP3 is quite limited, and the cellular taxa present in the tissue are relatively low.
