Background

PIBF1 is induced by the steroid hormone progesterone and plays a role in the maintenance of pregnancy. PIBF1 regulates multiple facets of the immune system to promote normal pregnancy including cytokine synthesis, natural killer (NK) cell activity, and arachidonic acid metabolism. Low serum levels of this protein have been associated with spontaneous pre-term labor in humans. PIBF1 may promote the proliferation, migration and invasion of glioma.

Synonyms

PIBF1, Centrosomal protein of 90 kDa, PIBF 1, Progesterone induced blocking factor 1, Progesterone-induced-blocking factor 1
